Digital Literacy Project

Name: Kavya

Reg No: 25BHI10099

Branch: B.Tech (Health Informatics)

Year: 1st Year

Course Code: CSE0001

This project is based on digital literacy and aims to develop essential skills required to use digital tools effectively and responsibly. As a Student Digital Ambassador, the goal is to create awareness about safe and professional use of digital platforms. This project includes various tasks such as creating an infographic, building a digital portfolio, exploring platforms, writing professional emails, and understanding cybercrime awareness.

Task 1

I created a digital literacy infographic using Canva, a free online design tool. The purpose of this design is to help students understand the importance of digital literacy in today's world. The infographic includes sections such as "What is Digital Literacy," "Useful Digital Tools for Students," and "Safe Internet Practices." Through this design, I highlighted key points like using technology effectively, finding reliable information, protecting privacy, and creating strong passwords.

While creating this infographic, I found Canva easy to use because it provides many templates, icons, and design elements. However, one challenge I faced was selecting the right layout and organizing the content in a visually appealing way without making it too crowded. This task helped me understand how to present information clearly using visuals, which is an important skill in digital communication.

Task 2: Build Your Student Digital Portfolio

I created my digital portfolio by setting up profiles on GitHub, LinkedIn, and Kaggle. Kaggle is a platform used for data science and machine learning where users can explore datasets and participate in competitions.Each of these

platforms serves a different purpose and helps in building a strong online presence.

GitHub is mainly used for storing and managing projects, especially in the field of programming and collaboration. I created a profile README that includes my basic details such as my name, course, and interests. LinkedIn is a professional networking platform where students can showcase their education and connect with professionals. I updated my LinkedIn profile by adding my education details, including my degree and university. Kaggle is a coding practice platform that helps improve programming skills through problem-solving. I created a profile on Kaggle to begin practicing coding challenges.

In the next four years, I plan to use GitHub to upload and manage my projects, LinkedIn to build professional connections and explore internship opportunities, and Kaggle to regularly practice coding and improve my technical skills.

Task 3: Explore Coding & Collaboration Platforms

In this task, I explored coding and collaboration platforms to understand their usefulness in academics. For the coding part, I used HackerRank, where I completed a beginner-level problem called “Solve Me First.” This helped me understand basic coding logic and how to write simple programs.

For the collaboration part, I used Google Forms to create a digital literacy awareness quiz consisting of five questions. The quiz included both multiple-choice and short-answer questions. I also linked the form responses to a Google Sheet, which helps in automatically collecting and organizing data.

These platforms are very useful for academic purposes. HackerRank helps in improving problem-solving and coding skills, while Google Forms is useful for conducting surveys, quizzes, and collecting data efficiently. Overall, this task helped me gain practical experience with important digital tools.

Task 4: Email Etiquette & Communication

In this task, I learned about professional communication and email etiquette. I wrote two emails: one requesting an assignment deadline extension and another expressing interest in a summer internship. While writing these emails, I focused on maintaining a formal tone, proper structure, and clarity.

I also created a checklist of do’s and don’ts for responsible social media use. This helped me understand how online behavior can impact one’s personal and professional image.

A situation where poor digital communication can cause problems is when a student sends an email without proper greeting or clarity, which may appear rude or confusing. This can be avoided by using polite language, clear subject lines, and proper formatting in emails.

Task 5: Reflection

While researching cybercrime, I was surprised to learn how easily people can fall victim to phishing attacks due to lack of awareness. Many cybercriminals create fake websites and messages that look very real, making it difficult to identify scams.

One habit I will personally change is being more careful while clicking on links and verifying sources before sharing any personal information. I will also ensure that I use strong passwords and enable two-factor authentication for better security.

This task helped me understand the importance of staying alert online and following safe digital practices to avoid cyber threats.

Conclusion

This project helped me understand the importance of digital literacy in today’s world. I learned how to use various digital tools, create a professional online presence, communicate effectively, and stay safe online. Each task provided practical experience and improved my confidence in using technology. Overall, this project was a valuable learning experience that will help me in my academic and professional journey.
